

Digital Power of Crowd for safer business

CYBERSECURITY IS FACING ITS BIGGEST THREAT

Industry has been providing customers with defence orientated solutions for the greater part of a decade. Yet, breaches still occur. Cybersecurity threats continue to proliferate, and there's a global shortfall of defence skills.

The eighth Global Information Security Workforce Study (GISWS) has revealed that the world will face a shortfall of 1.8 million cybersecurity workers by 2022. This is an increase of 20% on the five-year projection made in 2015 by its bi-annual Global Information Security Workforce Study.

Most cyber-attacks go unreported, and with so many happening, solidifying a strategy is more important than ever.

UNWANTED CYBER ATTACK OUTCOMES

- Customer relationships can be significantly damaged from an attack, with customers losing trust in the business.
- When a business is not running, it is losing money. If customers are unable to get what they expect, they will go elsewhere. They may not even come back after recovery.
- Insurance premiums can increase after a claim against business losses.
- When criminals get hold of business ideas, strategies or designs, they can be used to benefit competitors.

THE POWER OF CROWD

At Cyberfenders, we believe collaborative minds can strategize defence barriers more effectively. A group of peers can learn and share the most important practices to "Identify", "Protect", "Defend", "Respond", and "Recover", as well as the policies and processes to mitigate the risk of a cyber-attack.

INTRODUCING DTHREE

Cyberfenders operates Dthree ("Digital Defence Dojo"), a peer-to-peer learning group that addresses cybersecurity best practices and share hot topics in a structured way. Led by our team of experts, referencing the NIST Cybersecurity Framework and Retail Cyber Intelligence Sharing Centre, we share a common vision to educate each other in the interests of safer business. Dthree also helps members identify what they don't know, and maintain awareness of emerging threats that their organisations need to be aware of.

INDIVIDUAL PARTICIPATION

Dthree uses collaborative digital practices for working minds from anywhere in the world. Our approach is convenient for those in full-time jobs, whilst remaining the most cost-effective method for organisations to grow their cybersecurity wisdom. Groups do not exceed 15 members, with all levels of cybersecurity experience welcome. Dthree is technology agnostic and members are not subjected to vendor product selling or 3rd party spamming.
