

Cyber Readiness for Mid-Size Business

IS YOUR BUSINESS ADEQUATELY CYBER PROTECTED?

Cybersecurity teams are protecting society. They are the good guys who keep essential services, critical infrastructure, and the fabric of our lives working and available. Unfortunately, there's a world shortfall of cybersecurity professionals:

The eighth Global Information Security Workforce Study (GISWS) revealed that the world will face a shortfall of 1.8 million cybersecurity workers by 2022. This is an increase of 20% on the five-year projection made in 2015 by its bi-annual Global Information Security Workforce Study.

If you work for a mid-size business, then we are the cybersecurity team to talk to.

We understand that you have existing products, and that your business has its own digital landscape. There may be an incumbent team who have taken responsibility for your cyber defence.

No problem, we work well with others, and appreciate that your current investments may be vital to a sound defence strategy.

WELCOME TO CYBERFENDERS

There's no product pitch here, merely a mention: we have experienced individuals, accreditations, and technology partnerships. Yes, we offer proven products, but orchestrating a relevant cyber defence defines our primary purpose.

At Cyberfenders, there are no big company and management structures to base load what we do. Just good practice, solid expertise, and ease of working together.

WHAT WE OFFER

Enthusiasm and customer centricity. Cybersecurity as a managed service.

WHAT WE DO

- Cyber Defence Strategy
- Integrated Security Management
- Compliance Solutions
- Cloud Protection
- Intrusion Testing
- Server & Application Monitoring
- Breach Prevention: end user education
- Digital Peer-to-Peer learning group for cybersecurity teams

WHY US

Cybersecurity means we enjoy solving puzzles to best defend the castle, value the challenge of continuous learning, and always retain a sense of winning when digital operations remain uncompromised.

Talk to us about your cyber defence, risk mitigation, and business continuity. For more information on what we do, visit us at www.cyberfenders.com
